## GYPSUM BOARD:

### VitalGYP® - Gypsum Board

VitalGYP® Gypsum board is widely used for internal walls and ceilings by the construction industry, and is a material of growing importance in the do-it-yourself sector. It is manufactured by calcining gypsum into a plaster, making slurry from the plaster, and passing the slurry through machines which shape, set, and cut into a board.

As a new generation of green building material, paper-coated gypsum board is featured by energy conservation and high added value. Compared with the conventional or other new building materials, it is characterized by lightweight, high strength, low shrinkage, fireproofing, sound blocking, moisture adjuster, handle ability in construction and installation, short period of construction and less labor and cost.

#### Specification:

**Category:** Standard plaster board. Fire-resistant gypsum board, moisture-resistant gypsum board.

**Size:** 1200X2400mm 1220X2440mm  
1220X1830

**Thickness:** 8 to 16 mm
